```
The present invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor comprising an amino acid sequence encoded by 6 defined nucleotide sequences. The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (IL-9) and are described as T cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STMT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     T cell derived inducible factor; TIF; cytokine; interleukin-9; protein therapy; STAT activation; differentiation; mouse; ds.

```

The invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (IL-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunedeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence a partial genomic sequence for Human TIF.

New isolated nucleic acid molecules encoding T cell inducible useful as markers for expression or effect of interleukin (IL) subject and diagnosing susceptibility to asthma or allergy -

, -, (IL)-9

Nucleic acids encoding T inducing STAT activation cell derived inducible factors in cells useful for

Claim 1; Column 31-36; 24pp; English

The present invention relates to an isolated nucleic acid molecule, whice encodes a T cell derived inducible factor comprising an amino acid sequence encoded by 6 defined nucleotide sequences. The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (TI-9) and are described as T cell perived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is which

The gene was mapped to chromosome 12q15. The human TIF was identified based on homology to a murine TIF, which was identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (IL-9). BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation of targeted tissues. They can be used, e.g. in the stimulation of regeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          exon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                     This cDNA encodes T cell derived inducible factor (TIF) alpha identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (IL-9). BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation in cells. They can be used, e.g. in the stimulation of regeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and their coding sequences are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor (TIP) which are upregulated by the cytokine interleukin-9 (IL-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immundeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid molecules encoding T cell inducible factors, useful as markers for expression or effect of interleukin (IL)-9 in a subject and diagnosing susceptibility to asthma or allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1119 BP; 352 A; 233 C; 232 G; 302 T; 0 other;

                                                                      The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (IL-21). TIF polynucleotides are upregulated by the cytokine, IL-9. IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF alpha cDNA.
                                                                                                                                                                                  Stimulating expression of STAT transcription factor and inducing production of acute phase protein in a cell, involves contacting capable of expressing STAT with T cell derived inducible factors

APPLICANT: Dumoutier, Laure
APPLICANT: Louhed, Jamila
APPLICANT: Louhed, Jean-Christophe
APPLICANT: Renauld, Jean-Christophe
TITLE OF INVENTION: Isolated Nucleic Acid Molecules which Encode T Cell Inducible
TITLE OF INVENTION: (TIFs)
TITLE OF INVENTION: The Proteins Encoded, and Uses Thereof
FILE REFERENCE: LUD 5543
CURRENT FILING DATE: 1998-10-26
NUMBER: OF SEQ ID NOS: 17
SEQ ID NO 17
SEQ ID NO 17
LENGTH: 5935
TYPE: DNA
ORGANISM: Mus musculus

Sequence 25, Application US/09419568F

Patent NO. 6331613

GENERAL INFORMATION:
APPLICANT: Dunoutier, Laure
APPLICANT: Dunoutier, Laure
APPLICANT: Louhed, Jamila
APPLICANT: Louhed, Jamila
APPLICANT: Remauld, Jean-Christophe
TITLE OF INVENTION: (TIFs) The Proteins Encoded, and Uses Thereof
FILE REFERENCE: LUD 5543.2
CURRENT APPLICATION NUMBER: US/09/419,568F
CURRENT APPLICATION NUMBER: US/09/419,568F
CURRENT FILING DATE: 1999-10-18
PRIOR APPLICATION NUMBER: US/09/354,243
PRIOR FILING DATE: 1999-07-16
PRIOR APPLICATION NUMBER: US/09/373
PRIOR FILING DATE: 1998-10-26
PRIOR APPLICATION NUMBER: US/09/178,973
PRIOR APPLICATION NUMBER: US/09/178,973
PRIOR FILING DATE: 1998-10-26
PRIOR APPLICATION NUMBER: US/09/178,973
PRIOR FILING DATE: 1998-10-26
NUMBER OF SEQ ID NOS: 29
SEQ ID NO 25
LENGTH: 4797
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
